

K075/K075P

Service Manual

- Please read the manuals before using the product. Please strictly abide by the instructions. Once the user start to use the product, it is defaulted that the user have already accepted the disclaimer. The manufacturer will not undertake any responsibility if the user operate improperly and cause the damage to the product.
- The manufacturer will not specially inform the user if have any change for the manuals.

PRODUCT FEATURES

1. Specifications

K075 & K075P Specifications		
Flow Rate		
	Continuous(15psi drop)	2M ³ /H (9 gpm)
	Peak(25psi drop)	3.1M ³ /H (14 gpm)
	Max Backwash(25psi drop)	1.0M ³ /H (4.5 gpm)
	Service CV	2.7
	Backwash CV	1.0
Regeneration		
	Downflow/Upflow	Downflow Upflow
	Cycles	5
Meter		
	Accuracy	±5.0%
	Capacity	0.07 – 3.1M ³ /H (0.3 – 14gpm)
Adaptor & Base Specification		
	Inlet/Outlet	1" or 3/4", NPT or BSPT
	Base	2 1/2"-8NPSM
	Distributor Pilot	3/4" Pipe, 26.7mmOD
	Drain Line	3/8" OD Elbow QC
	Brine Line	3/8" OD Elbow QC
Working		
	Power supply	Input:100~240VAC 50/60HZ Output:DC12V/0.5A
	Max. VA	6W
	Pressure	1.4-8.0Bar/20-120psi
	Temperature	1°C ~ 43°C/33°F ~ 109°F

PRODUCT FEATURES

2. Dimensional drawing

The unit of the number in brackets is "inch", rest is "millimeter".

PRODUCT FEATURES

3. Introduction for regeneration modes

3.1 Regeneration modes for softener valve

1) SOF1-Time softener mode

- Regeneration initiates at the preset time in every set override days.
- The regeneration mode could be set in Pre-refill.

2) SOF2-Week-Day softener mode

- Regeneration initiates at the preset time in the preset date of the week. At least one day of a week need to be chosen.
- The regeneration mode could be set in Pre-refill.

3) SOF3-Meter-immediate softener mode

- Regeneration initiates immediately when the volume capacity reaches zero.
- If the preset override days zero out firstly while not reach the preset water capacity, the regeneration will initiate at the preset time of the day.
- The volume capacity could be automatically calculated by the controller or manually input.

4) SOF4-Meter-delayed softener mode

- Regeneration initiates at the preset time of the day when the volume capacity reaches zero.
- If the preset override days zero out firstly while not reach the preset water capacity, the regeneration will initiate at the preset time of the day.
- The volume capacity could be automatically calculated by the controller or manually input.
- The regeneration mode can set Pre-refill and Proportional regeneration.

3.2 Filter valve

Filter valve only have backwash and rinse. The valve will initiate the backwash and rinse at the preset time in every set override days.

3.3 Auto cycle sequence

The valve can regenerate in downflow or upflow. It also will adjust the regeneration step accordingly based on the user's setting. Please refers to the below cycle sequence.

Cycle sequence for different valve type

Type	Softener				Backwash Filter
	Down flow		Up Flow		
Cycle	Post Refill	Pre fill	Post Refill	Pre fill	—
1	Backwash	Refill/Dissolve	Brine draw	Refill/Dissolve	Backwash
2	Brine draw	Backwash	Backwash	Brine draw	Rinse
3	Rinse	Brine draw	Rinse	Backwash	—
4	Refill	Rinse	Refill	Rinse	—

PRODUCT FEATURES

4. Power-off

4.1 Without backup battery

- 1) When the power is off in the service position, the control valve will keep in the same position when the power restored.
- 2) If the power-off happens in any regeneration cycles, once the power restored, the control valve will automatically look for and stop in the position where power-off happens. Then it will continue to complete the regeneration steps.
- 3) If the power-off occurs when the control valve is moving from one position to the other, once the power restored it will look for and stop in the target position where power-off occurs. Then it will continue to complete the regeneration steps.

4.2 With backup battery

If the valve has backup battery, the valve will continue to complete the current regeneration and drive the valve to the service position when the power is off. The valve can work normally when the power restores.

5. Intelligent control

5.1 Pre-refill

Soft water refill before the regeneration. Pre-refill can keep the brine tank dry to prevent bacteria from growing in the brine tank. The salt dissolving will be shown as below.

↕ Alternating ↗

5.2 Optional Proportional Regeneration

The control valve will only regenerate the exhausted resin according to the water usage. This can keep the resin fully effective. At the same time, salt and water can be saved.

5.3 Holiday mode

When holiday mode is set, the resin will be regenerated at fixed period to keep the resin effective. The holiday mode will automatically be turned off when the water usage reach set water volume.

6. Optional Blending valve

The water hardness can be adjusted by blending valve.

7. Optional bypass valve

Customized bypass can be chosen if need.

OPERATION AND SETTING

1. Buttons

User program set

Enter

1. Confirm and save the current setting
2. Basic information query

Up

increase or cycle

Down

Decrease or cycle

Cycle

1. Return to the previous setting
2. Press and hold for 5 seconds, initiate regeneration immediately
3. In service position, press to initiate a queued regeneration

Press and hold for 3 seconds simultaneously

Enter the OEM setting

Press and hold for 3 seconds simultaneously

Enter advanced set for softener valve or set for filter valve

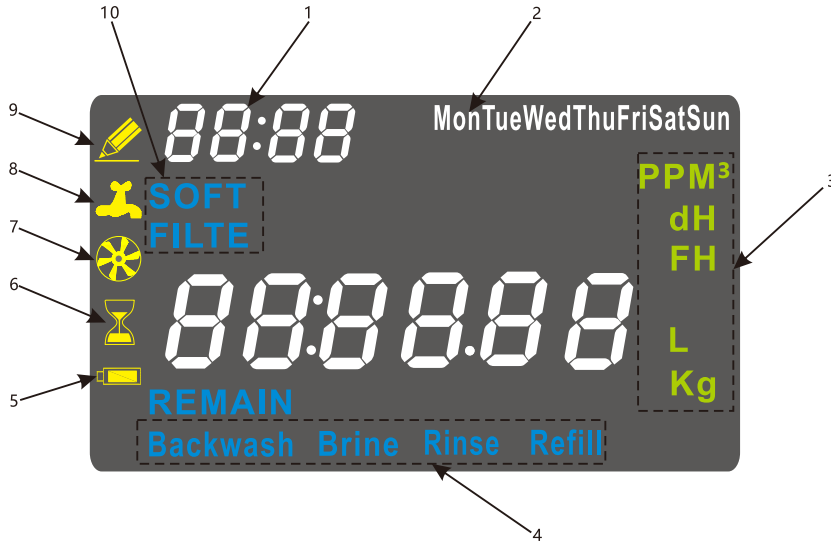

Press and hold for 3 seconds simultaneously

Query the historic datas

OPERATION AND SETTING

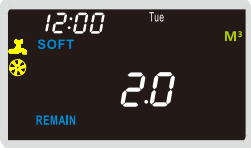

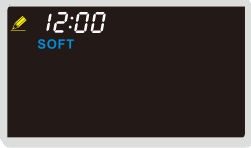

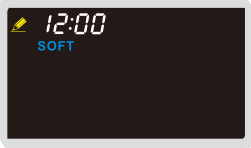

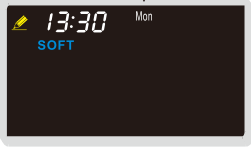

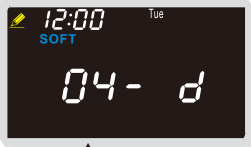

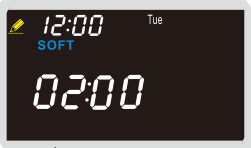

2. Screen Display

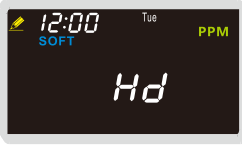

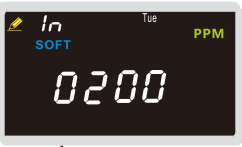

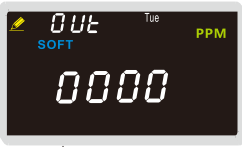

1. Current time.
2. Week information.
3. Unit.
M³/L - flowrate; PPM,dH,FH - Hardness unit,dH - German hardness
FH - French hardness, Kgm³ - total resin exchange capacity .
4. Cycle step.
When it's flashing,it means the control valve is moving to the current cycle step.
5. Battery.
The backup battery has been installed. When it's flashing,it means the battery power is low.
6. Queue regeneration.
When it is flashing, the control valve is under queued regeneration.
7. Flow meter.
When it is flashing, the water flow is passing the flow meter.
8. In service.
When it's flashing,it means the control valve is moving to the service position.
9. Edit.
When control valve in data setting.
10. Valve type.
SOFT - Softener valve, FILTE - Filter valve.

OPERATION AND SETTING

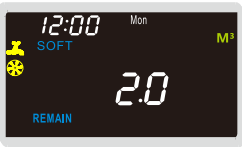

3. User Program Set

OPERATION AND SETTING

Display	Default	Range	Description
	N/A	N/A	7. Display for filter valve When the override days reaches 0 day, the display panel will show the time to regenerate for the next time.

OPERATION AND SETTING

8. Query Information

8.1 Query basic information

In service position, press  for 3 seconds to enter and query. Then press  to check the next item.

Check the valve regeneration mode

Check the valve with downflow or upflow

Check the remaining days for maintenance

Return to service position

8.2 Query Historic data

In service position, press   for 3 seconds to enter and query. Then press  to check the next item.

Current flow(L/min).

Peak flow(L/min).

OPERATION AND SETTING

Total flow after installation.

Total using time after installation.

Total regeneration times after installation.

Total time interval between the last 2 regeneration.

Time from the last regeneration.

Remaining days to the next maintenance.
Press and hold  for 10 seconds reset maintenance time.

Return to service position

OPERATION AND SETTING

9. Backup battery(Only apply to K075P valve)

Please open the battery cover and connect the battery with the connectors after configuration.

 **Battery mode 6LR619V is applied to the backup battery.**

Battery icon

For extending the battery lifetime, we kindly suggest that you should connect the battery after the control valve is all well set.

10. Holiday mode

Holiday mode is only available for SOF3 & SOF4. In service position, press  for three seconds to turn on holiday mode. Press  for three seconds to cancel it.

1) Holiday mode turn-on: In service position, press  for three seconds to turn on holiday mode. Total water usage < 18L, Current flow < 6L/min, treat the day as the 1st day, then enter into holiday mode cycle.

2) Holiday mode cycle: Initiate full regeneration for the first time on the fifth day. Only back wash and rapid rinse for each four days after the first regeneration.

3) Holiday mode automatically turn-off: Total water usage $\geq 18L$ or Current flow $\geq 6L/min$.

11. Blending valve

Blending valve is optional. The valve body is different with blending valve and without it. Please check the below pictures.

Blending valve is defaulted to be off. If need to adjust the water hardness, please open blending valve and it is only can be done by the professional person. The water hardness should be re-tested.

OPERATION AND SETTING

12. Optional chlorine producer (Only apply to K075P valve)

Chlorine producer will work in brine draw. Chlorine gas can sterilize the resin and keep it effective.

13. Bypass valve

Rotate the handles to adjust the bypass position.

Service position

Bypass position

Shut-off position

REMINDING AND CHECKING

1. Backup battery

Backup battery will keep the CPU and flow meter working as normal.

Battery power

When the battery power is low, the icon "  " is flashing to remind the user to replace the battery.

Power supply on /off

If the valve without battery and power supply off happen during the regeneration, the valve will keep in the current position. The valve will continue to regenerate after calibration when the power supply on. No need to calibrate if the valve is in service position.

If the valve with battery, the valve will remind the user in sound and words. The screen will power off in 5 seconds. However, the buzzer will keep alarm. The user can cancel the buzzer to press .

2. Maintenance reminding

When it is time for maintenance, the display will automatically remind the user to call for maintenance.

Press  cancel the alarming and return to service position.

3. Reminder for low salt

When lack of salt, the screen will show as following:

- 1) The screen will alternately show service position and reminding information. The buzzer will alarm in the period of 19:30~22:30 to remind the user to add the salt on time.
- 2) The user can short press  to cancel the buzzer alarm manually. But salt adding reminding can't be removed.
- 3) Salt adding reminding won't disappear until the salt is added to be higher than the reserved level.

REMINDING AND CHECKING

4. Queued regeneration

In service position, press  initiate a queued regeneration, then the icon  will flash. The control valve will regenerate at the preset regeneration time of today. Press again  to cancel the queued regeneration.

Display for SOF1, SOF2, SOF4.

For SOF3, remain water capacity and remain time alternating display until whichever zeros first.

5. Manual initiate a regeneration

In service position, press and hold  for 5 seconds, the control valve will initiate an immediate regeneration. Press  again will switch to the next cycle step.

6. System errors automatically detect and remind

The control valve will automatically display and alarm any detected system errors. The detailed information is as follows.

a. Can not locate service position

b. Optical sensor does not have the signal

REMINDING AND CHECKING

c. Electric motor stalled or locked

d. Wrong service position

7. Reset

If any Error alarming occurs on the screen, simultaneously press + and hold for 3 seconds to reset, if success the error alarm will disappear and it will return to the position where the error occurs. Otherwise call the professional person for more help.

8. Restore factory settings

When the valve is power-off, press and power on the valve. The display will show as picture.

Release , the parameters of the valve will be restored back to defaulted setting.

9. Special reminder

1. As the picture, three U clips can't be pulled out by the user to avoid water leakage caused by improper installation.
2. When assemble the valve on the tank, the most appropriate torque is no more than 35N.M. Need to control by the professional installer.

REMINDING AND CHECKING

10.Common Failures

Common Failures	Reason analysis	Solutions
The controller fails to regenerate automatically	1 Disconnected meter cable.	Reconnect the meter cable.
	2 Transformer damaged.	Replace the transformer.
	3 Electronic controller or sensor damaged.	Replace or repair.
The treated water hardness is higher than setting	1 Bypass valve is not in service position.	Adjust the bypass valve to service position.
	2 The inlet and outlet water pipe are installed in reverse.	Install the water inlet and water outlet pipe correctly.
	3 The raw water hardness is higher than setting.	Reset the inlet hardness.
	4 Resin is polluted and invalid.	Contact with the agency and change the resin.
	5 Brine concentration or quantity.	Keep brine tank full of salt at all times. Clean it yearly. If using a salt grid plate, insure refill water is over it .
Softener fails to brine draw	1 Plugged drain line or BLFC.	Clean drain line and flow control.
	2 Injector plugged.	Clean injector, replace injector screen
	3 No water in the brine tank.	Check for restriction in BLFC. Ensure Safety float is not stuck
Salty taste for treated water	1 Low pressure for inlet water.	Install booster pump to increase pressure of inlet water
	2 Drainage pipeline is blocked.	Clean up the jams.
Continuous flow to drain	1 Internal control leak.	Call dealer. Clean valve, rebuild unit.
	2 Piston jammed in brine.	

MAIN COMPONENTS

● Control valve components

Item	Part No	Description	Quantity
1	1260641	Front Label	1
